

Installation Instructions

- **Separate both sides of duct from components.**
- **Position wall cover over wall hole. Drill appropriate screws (not included) through screw holes on cover.**
- **Slide back of duct through the inside of wall cover and secure by drilling.**
- **Position piping along center of duct. Once in place, snap front cover of duct to the back end.**
- **Secure duct to wall with one screw for every 18 inches.**
- **Use various connectors and end cap as needed. Ensure back and front plate of each connector are secured using included screws.**
- **To connect flexible duct, line up grooves with straight duct and insert until cuff on flexible duct is not visible.**
