

WHEN YOU NEED LARGE, FAST, EASY TO SEE BUBBLES

DON'T BLOW IT!

Our family of liquid gas leak detectors are thick enough to stay on the pipe, yet thin enough to run around it. They produce large, fast acting lasting bubbles that are immediately recognizable. Their fluorescent color locates all leaks, so even the smallest bubbles sparkle under light.

Choose your applicator - reach all areas to find large and small leaks. We also offer a choice of temperature ranges, that provide superior performance under all conditions. Highside leak detectors produce more bubbles, bigger and better bubbles, and cost less!
